

PROJECT STATUS REPORT	
<b>Project Name</b>	WorkFlow
<b>For Week Ending</b>	Week7 Date: October 20, 2023
<b>Project Status</b>	Green 
<b>Status Description</b>	Compared the prototypes Conclude the possible solutions (up to three solutions)
<b>Activities—During the Past Week</b>	
Last week, we developed development of low-fidelity prototypes to visualize the appearance and functionality of our application. These prototypes served as early-stage representations, allowing us to experiment with design concepts and gather valuable feedback. During this process, we compared multiple prototypes, evaluating their strengths and weaknesses to determine the most effective and user-friendly design.	
we considered and explored multiple solutions, considering up to three distinct design options. Through discussions and decision-making process, we had decided the best design.	
<b>Activities—Planned for Next Week</b>	
We are now shifting our focus towards improving the visual appeal of our software and ready to make some high-fidelity prototypes using 'Figma,' (It's a really important step where we'll put the finishing touches on our designs and make them interactive for users)	
We are going to play around with photos and picking fun colours to make the app look better and give users a more enjoyable experience.
