PROJECT STATUS REPORT

Project Name	WorkFlow
For Week Ending	Week6 Date: October 12, 2023
Project Status	Green ☺
Status Description	Discussion the high-level design(components and interaction of the software) and design process(detailed design, implementation, testing and documentation)

Activities—During the Past Week

During our meeting, we discussed the high-level design of our software, based on the objectives we have set. Initially, we identified the crucial function-related components required for the software, such as the scheduling page for employees to submit their weekly schedule and the manager page for adding or deleting schedules. Next, we specified the main components and their relationships, ensuring that all users can access the desired page through the other pages. Finally, we outlined the interfaces and interactions between the components.

We applied the user experience principles that we learned in previous courses to create a user-friendly environment for our web page. We also discussed the next phase, which would involve creating a plan for constructing the software. This includes detailed design, such as lo-fi and hi-fi prototyping, implementing codes, testing, and finally documentation.

Activities—Planned for Next Week

We will develop a few low fidelity prototypes and then exchange and discuss our ideas.

Project Issues

No issue found.
